Bogdan Lent : Dataflow Architecture for Machine Control (Industrial Control, Computers and Communication Series) before purchasing it in order to gage whether or not it would be worth my time, and all praised Dataflow Architecture for Machine Control (Industrial Control, Computers and Communication Series):

How to implement the latest control strategies using state-of-the-art control technology and computing principles. Provides all the basic definitions, taxonomy, and analysis of currently-used architectures, including microprocessor communication schemes. Then goes on to describe in detail the analysis and implementation of the selected OR dataflow driven architecture in a grinding machine control system.
