From Images Publishing Dist Ac : Designing With Solar Power before purchasing it in order to gage whether or not it would be worth my time, and all praised Designing With Solar Power:

Designing with Solar Power is the result of international collaborative research and development work carried out within the remit of the International Energy Agency's Photovoltaic Power Systems Programme (IEA PVPS), where world-wide and interdisciplinary expert experience on building-integrated photovoltaics has been brought together to provide state-of-the-art information on technology and design issues. This book's mission is to inspire building professionals to think about photovoltaics as an energy-producing building material, and to incorporate this energy

source whenever possible. Hundreds of photos, diagrams and charts demonstrate the fundamentals of photovoltaics, the hurdles to be faced, experience to date, and overall, its enormous potential. More than twenty international case studies demonstrate the learning curve that has accompanied the early years of building-integrated photovoltaics.
