It is the only source I have found that provides such clear and concise information on quality shadesails. The book includes great discussions and instructions for all aspects of design and installation. I found the description of all parts and equipment to be the most helpful, as it ensures I will always purchase the right parts to make a safe, quality, and professional shadesail! The illustrations provided were also very spot on, and I feel confident that with this book, I can install my own DIY shade. I would highly recommend this book to anyone interested in shadesails. It's very well written and easy to follow, and understand. 0 of 0 people found the following review helpful. In way over my head on this! By L. Waterbury This is a very technical book detailing how to make high quality sail shades suitable for commercial use and installation. Way overkill for my simple needs and interest however I can appreciate it for the very serious craftsman. Well written but returned. 1 of 1 people found the

Finally, A STEP-BY-STEP How-To Manual for installing your very own PROFESSIONAL QUALITY SHADE SAIL. "DIY Shade, Shade Sails Made Easy" explains in easy to understand language the best practice for sourcing and installing your very own Shades / Shade-sails.

I've been in the shade industry now for many years both in sales and onsite installation. I've heard all the problems people have when they decide to save a few dollars and do it themselves. Trust me, most people stuff it up. The simply don't account for the loads that shade sails generate when strong winds come along and the results are bent poles or hooks literally ripped out of walls. This book really speaks to the DIY shade-sail installer in a practical and knowledgeable way. I personally know the author and consider him to be one of the most experienced people in the industry. For the relatively low cost of purchasing this book - AND ACTUALLY FOLLOWING WHAT IT SAYS - you will save yourself not just a lot of money, but a whole lot of grief. - Mark BatmanFrom the AuthorIt's my hope that you've found this book, BEFORE you decide to undertake the installation of a shade sail yourself. Certainly installing a professional quality shade sail isn't rocket science but, there are lots of tricks and traps for the first time shade-sail installer. Trust me, I've made them all! Things like making the sail too long and narrow, not having adequate fall on the sail and using a sub-standard shade-cloth (and stitching) are all things that will let your job down and cause you to end up with a less than perfect result.
