This book has answered so many questions that I've had about earthen materials for building. I owe it to this James Henderson for giving me the answers in this book. I have big plans underway that utilize methods explained in this book, and I am anxious to see how they perform through the years. Great book! 1 of 1 people found the following review helpful. Five Stars By Customer This is a great book - especially since it's Australian which is an added bonus. 0 of 0 people found the following review helpful. Five Stars By Patricia B. as expected

Rendering or plastering is a craft as old as house building, the basic methods and concepts having changed little over time. This book offers a detailed look at the use of raw earth for painting and rendering walls in new as well as in existing buildings, focusing on sand-clay render, straw-clay render and clay paints. The skills needed to create and apply these natural finishes are easy to learn and the tools required are minimal, most people quickly picking up the skills as though something inside them has been rekindled from former lives!
