" i didnt know that" perfect for reviewing and organizing your mindBy john douglasawesomely compact. no extra nothing. i have a lot of pc books but i still go , " i didnt know that"perfect for reviewing and organizing your mind. and of course for the teacher (i am not one formally)1 of 1 people found the following review helpful. Classic lesson planning for Permaculture teachersBy Peggy CadiganThis is simple but complete and helpful for staying on track with a classic lesson plan format. I think anyone planning to teach a course in permaculture would find it beneficial, even if they don't use most of it.0 of 0 people found the following review helpful. Five StarsBy CustomerExcellent!!

Permaculture design is a powerful tool for creating systems that meet our human needs but also support the ecosystem as a whole. It applies ecological principles to designing gardens, farms, community projects, even entire human settlements. The standard seventy-two-hour Permaculture Design (PDC) course is taught all over the world to farmers, gardeners, design professionals, and world changers who want to practically create a healthier, more equitable planet. Rosemary Morrow offers evidence for permaculture's effectiveness and describes each unit of the PDC's curriculum. This fully revised and updated edition contains a wealth of technical information for teaching permaculture design and includes new findings in emerging disciplines such as regenerative agriculture. *Earth Users Guide to Teaching Permaculture* is of key relevance to teachers and students of architecture, landscape design, ecology, and other disciplines like geography, regenerative agriculture, agro-ecology, and agroforestry, as well as permaculture design. It leads the reader step by step through a recommended course structure, providing a flexible approach that encourages the adaptation of the materials for specific bioregional and cultural conditions. With advice on teaching aids, topics for class discussion, extensive reading lists, and tips on teaching adults, this book is bound to be an invaluable friend to the experienced and novice teacher alike.

Even after teaching permaculture for over a decade, I still found plenty of useful information and tips here. It is packed full of interesting technical details, which as well as being valuable in themselves, serve as thorough reminders of what to include. This is balanced with suggestions on different ways of teaching. She provides us with questions to ask our students that are thought provoking and encourage personal connection and insights. Looby Macnamara, permaculture teacher and author of *People and Permaculture* About the Author Rosemary Morrow is known and revered worldwide for her pragmatic and effective approach to creating permaculture systems across an incredibly broad range of environments. Rosemary has successfully implemented community-scale permaculture systems in such diverse biospheres as Uganda, Ethiopia, Cambodia, Thailand, the Middle East, Australia, and northern Europe, to name but a few. Her knowledge on how to create abundance, food security, and successful sustainable farming models, no matter what the country, is unparalleled in permaculture education today.
