**Katherine S. Ankerson : Elements of Interior Lightframe Construction** before purchasing it in order to gage whether or not it would be worth my time, and all praised Elements of Interior Lightframe Construction:

This CD-ROM and workbook package provides users with the information needed to understand how construction components are assembled, attached, installed, and built. The material examines both lightframe and commercial construction by discussing the similarities and differences of general occupancies and detailing the structural materials used. Formatted for both Mac and PC platforms, this CD-ROM contains text accompanied by animations and audio features that enable the user to understand the visual properties of construction systems. These features also explain each component's relationship to other elements and the project as a whole.

About the Author Katherine S. Ankerson, MS, NCARB certified, IDEC, is Department Head of Interior Architecture

and Product Design in the College of Architecture, Planning and Design at Kansas State University. She has previously held positions as Associate Dean and Professor of Interior Design at the University of Nebraska-Lincoln and Professor at both Radford University and Washington State University following 15 years as an architectural and interior design practitioner. Ankerson's work lies in the areas of senior living environments, particularly adaptive environments that encourage aging-in-place; and learning and teaching in the design disciplines. Her teaching most regularly includes undergraduate, upper-level studio courses and interior construction documents, and graduate courses in interior design. She has written several books and has authored multiple articles and presentations.
