**Cecil A Hewett : English Historic Carpentry** before purchasing it in order to gauge whether or not it would be worth my time, and all praised English Historic Carpentry:

Merschrod This book is an excellent resource for timberframe builders, designers, or enthusiasts. It is very technical though, and many of the terms are undefined in the glossary. The illustrations are superb. It has multiple indexes on specific joints. One index, for example, has an illustrated list of every single scarf joint imaginable, with a description of the joint's history and how well it functions. I love this book. Every architect and timberframer should own this book! It is very inspiring.

Documents the structure of the world's greatest timber buildings, and shows how the framer's craft has evolved over the past 1,000 years.
