**Fred Hall : Essential Building Services, Second Edition** before purchasing it in order to gage whether or not it would be worth my time, and all praised Essential Building Services, Second Edition:

0 of 0 people found the following review helpful. Essential Building Services and EquipmentBy Abigail WalkerThis book is helpful to anyone who is interested in the basic design of all building services systems.As an overview of traditional methods and alternatives in ventilaltion, heating, utilities, and travel within buildings, in fact all aspects of the built environment; it is very helpful. The book is well written and easy to read and understand. Subjects are clearly

explained often with the help of diagrams and system schematics. The book is not an in depth guide to any of the topics covered - (a more specialised book should be sought for help with system design) but is recommended for students starting a specialisation in Building Services or those with an interest in the subject.

'Essential Building Services and Equipment' is a concise and handy reference work for students and construction industry personnel, from the craftsman to the higher technician and the site manager. This new edition has been fully updated in line with latest Building Regulations. The coverage is appropriate for courses from RICS, CIOB, City Guilds and BTEC. Also, this is an ideal book for the building services units of the Advanced GNVQ. Taking a similar approach, with numerous illustrations and concise text, this book is the perfect companion to Roy Chudley's 'Building Construction Handbook'. Frederick Hall was formerly senior lecturer in building services and equipment at Guildford College, and is a respected author of books on building services.

'An excellent, compact publication, ideal for most students on general building courses.' Building Technology and Management  
'An excellent summary of the whole range of services, principles, methods and regulations.' Master Builder  
'A useful reference book, particularly for students.' Building Services
