M Friedman, K Martel, A Hill : Establishing Site-Specific Flushing Velocities (Awwarf Report S) before purchasing it in order to gage whether or not it would be worth my time, and all praised Establishing Site-Specific Flushing Velocities (Awwarf Report S):

Utilities need guidance related to appropriate flushing velocities in order to achieve a balance between water quality improvements, demand for OM resources and water conservation. The objective of this project was to determine the range of flushing velocities required to dislodge and remove various accumulated materials from water distribution mains based on site-specific conditions. Twelve utilities from 3 countries (USA, UK, Australia) participated in this

study. Research Partner: KIWA
