From CSIRO PUBLISHING : Forest Trees of Australia before purchasing it in order to gauge whether or not it would be worth my time, and all praised Forest Trees of Australia:

0 of 0 people found the following review helpful. Five Stars
By Eric R. Good quality and very prompt international delivery
3 of 4 people found the following review helpful. Excellent book with excellent material information
By Jaimesix This is an excellent book with down to earth material information. If interested in Australian species as a whole or perhaps into Eucalyptus trees, this book is a 5 star purchase.
0 of 1 people found the following review helpful. Timeless text
By Roddy This book is invaluable as a lifelong object of review. There is no other work as comprehensive or as celebrated. For identification and evaluation of the finest resource the planet has to offer, it is without par.

Forest Trees of Australia is the essential reference for observing, identifying and obtaining information on the native

trees in this country. It describes and illustrates over 300 of our most important indigenous trees, which have been carefully selected for their environmental significance, their importance to the timber industry, or their prominence in our landscape. This new and thoroughly revised edition has been fully updated throughout and includes treatments of 72 additional species. New maps and photographs show us a wonderfully diverse range of forests, from mangrove swamps, tropical regions and deserts, to alpine areas and majestic stands of temperate forests. A colour section illustrates some of the major forest types of Australia and bark from a diverse range of species. Forest Trees of Australia is an unsurpassed guide to identification for horticulturists, botanists, foresters, students, farmers, environmentalists and all those who are interested in our native trees.

"There is no doubt that this is an accurate, reliable and well-presented book." (Leon Costermans The Victorian Naturalist)"Foresters, botanists, horticulturists, a wide range of students, farmers and all people interested in native Australian trees will find this text a valuable reference." (HW Markov Biological Abstracts)"As with the earlier editions it will be widely used as a valuable reference to assist in the identification and recognition of 300 of our most important indigenous trees." (Gwen Hardon, Australian Systematic Botany Society Newsletter)About the AuthorM.I.H. Brooker
