Aurora Fernández Per, Javier Mozas, a+t research group : Form Data. Collective Housing Projects: An Anatomical Review before purchasing it in order to gauge whether or not it would be worth my time, and all praised Form Data. Collective Housing Projects: An Anatomical Review:

This publication presents a review of projects built between 2013 and 2016, to which an anatomical dissection of the elements constituting their form has been applied. It offers an integral vision of each work, from its implementation in the territory to the breakdown of its typologies, and continues along the line of inquiry first taken with *Why Density?*, developing the concepts on building the dense city expressed therein, this time with new projects. The book is part of the Density series, initiated in 2002 by a+t research group (currently Aurora Fernández Per and Javier Mozas), which is

considered to be a key instrument in the global investigation of collective housing.
