We originally saw this in the Library and it was a 'must have' book. Will be starting our custom furniture this summer for the recently landscaped garden.

For gardeners looking for interesting ways to display treasured plants, practical solutions to storage problems, and pieces of furniture to enhance the patio, or woodworkers seeking new ideas, this text presents a collection of woodworking projects for any garden. Using basic woodworking tools, sustainable timbers and hardware adhesives, the author explains how to construct a whole array of garden items using straightforward techniques and with no need to master difficult traditional woodworking joints. Gardeners with no previous woodworking experience can tackle

any of the simpler projects. The designs are graded for difficulty and new techniques are introduced progressively so beginners can increase their skills gradually. More complex projects are suitable for experienced woodworkers. Full step-by-step instructions, detailed cutting lists and isometric drawings show exactly how each item is constructed and photographs of the finished projects are provided.
