From W Foulsham Co Ltd : Gardening and Planting by the Moon 2017 before purchasing it in order to gage whether or not it would be worth my time, and all praised Gardening and Planting by the Moon 2017:

0 of 0 people found the following review helpful. More info than I needBy Deana WilliamsI'm sure this book has wonderful information, but it's way more than I was looking for. I just wanted a detailed planting schedule for my garden this year.

You won't have to get up in the middle of the night to sow your carrots! Country folk know that planning their work in harmony with the rhythms of the moon produces better crops. It's that easy. They get higher yields and better flavour in vegetables. Flowers produce stronger displays and heightened colour. This gardening guide computes everything you need to know about the daily influence of the moon and the planets. With its full 15-month daily calendar, it creates an essential timetable for the year ahead and is also a fine means of self-discipline for keen gardeners.

5 stars, . John Mercer. For 6 years I've followed these recommendations and they certainly seem to work. Apart from anything else, they instil a discipline into seed sowing and planting, thus avoiding the sudden urge to do everything at once as soon as the spring weather comes!; 5 stars, . Catherine Apps. This method of gardening has worked very well. I have been gardening for over forty years and the best results have been from biodynamic methods.; 5 stars, . Jayne Turner. Brilliant book. Really works. Never garden without it. About the Author Nick Kollerstrom is a historian of science, a former honorary research fellow in Science and Technology Studies at University College, London (UCL), and a former lunar gardening correspondent for the BBC. He has been writing Gardening and Planting by the Moon since 1980.
