**From Springer : Gardens and the Passion for the Infinite (Analecta Husserliana) (Volume 78)** before purchasing it in order to gage whether or not it would be worth my time, and all praised Gardens and the Passion for the Infinite (Analecta Husserliana) (Volume 78):

0 of 3 people found the following review helpful. Nice book for advanced learnersBy Dr. Atul TiwariThis book is only for those who want to learn mechanics of materials at graduate or higher level.3 of 8 people found the following

review helpful. A fascinating account of early astronomical records  
By John Seymour  
A fascinating and readable account of astronomy in the ancient and mediaeval world. This book contains an detailed description of eclipse records and their place in early societies. Highly recommended.  
0 of 5 people found the following review helpful. Excellent  
Composites Text  
By Nick D.  
Great resource on composite materials. I used it in my Undergraduate study of aerospace composites. The book served as a great resource in introductory composites. I haven't studied much of the higher-level content of the book, but it's still in my bookshelf. I plan to continue the study of aerospace composites at the graduate level, and you can guarantee that I will be breaking this book out once more. The book came as described in great condition. This was much cheaper than the full retail price of the book. Would definitely recommend to other seeking a resource on composites.

What essentially is a garden? Is it a small plot of land that we put aside to cultivate our favorite vegetables or to grow flowers for our personal enjoyment? Or is it a symbol, a mirror, a reflection of our human passions? The topic of the present volume is the mysterious ways in which *Imaginatio Creatrix* plays within the human ingrownness in natural life, transposing dreams, nostalgias, and enchantments.

Illustrations throughout, both photographs and drawings, are of consistently high standard. No effort has been spared to make this an outstanding handbook and guide to the latest and most practical cleaning technology together with serious attention to health and safety aspects and the wealth of new legislation for which guidance on compliance is so important.' The RoSPA Occupational Safety Health Journal, June (2001)  
From the Back Cover  
This book contains substantially extended and revised versions of the best papers from the 12th International Conference on Enterprise Information Systems (ICEIS 2010), held in Funchal, Madeira, Portugal, June 8-12, 2010. Two invited papers are presented together with 39 contributions, which were carefully reviewed and selected from 62 full papers presented at the conference (out of 448 submissions). They reflect state-of-the-art research work that is often driven by real-world applications, thus successfully relating the academic with the industrial community. The topics covered are: databases and information systems integration, artificial intelligence and decision support systems, information systems analysis and specification, software agents and internet computing, and human-computer interaction.  
About the Author  
Professor Theo Kuipers is the author of *From Instrumentalism to Constructive Realism* (Synthese Library 287, 2000). He is the leader of the Groningen Research Group 'Cognitive Structures in Knowledge and Knowledge Development', which gained the highest possible scores in two successive assessments of Dutch philosophical research by international committees.
